There is a broken link which points here for all the data from 1990 to present on this page:

<http://waterinfo.org/arsg/indexinfo.html>

The link is

<http://www.waterinfo.org/arsg/main.html#data>

The only place that I was able to get data from was here:

<http://waterinfo.org/arsg/index.html#data> - I have compiled the data but do not see anything from 2005 onwards

Assuming we do indeed have all the available data compiled which format do you prefer?

Thanks,

ANDREW LONGWORTH

We are also looking at trends to take to the discussion tomorrow night.

Here are a couple of charts that START is helping put together for Steve and me. They identified a large gap in analytical data they are looking at from the USGS gauges. Are there any more Riverwatch, DOW, BOR, or other analytical data for the 2004-2009 period from the four gauges in Silverton? ALL AVAILABLE DATA ARE ON OUR WEB SITE--THROUGH NOV. 2009.

Also, do you know what caused the 1999 spike on the Cd chart? NO, COULD IT BE DETECTION LIMITS?

Hopefully the weather will cooperate and we will see you all tomorrow evening.

Sincerely,

Sabrina Forrest

Sabrina,

Here are two examples of possible data presentations:

I have plotted November data as it is a consistent data set across the highest number of years, meaning that we can present the data without too much manipulation.

Steve said he wanted a line graph, the best way to do this is to smooth the data with a 3rd order regression. However the data from before and after treatment plant closure are really from different data populations and it is not necessary accurate to plot them as being connected.

The Zinc chart shows a jump after 2003, but the data from 1999 and 2000 tends to diminish the validity of this jump, I am hoping that the data from 2005 to 2009 would provide a more robust distinction between the data sets.

Thanks,

Re: Animas

Can you send us something to look at? Then maybe I can talk with the ARSG to see what they have that is not in their public database that could help.

Steve/Sabrina

I crunched the data last Friday, it looks like we have good coverage for the time before the treatment plant shut down but the data gap from 04 to 09 is quite glaring. It makes it hard to draw conclusions and/or identify trends within the data. Is there any way we can get the data for this time period?

Thanks
Andrew
